PROFESSIONAL SUMMARY

IT and Platform Operations leader with experience spanning end-user support, systems administration, network architecture, and cloud/Kubernetes infrastructure, bridging business technology and production platforms.

PROFESSIONAL EXPERIENCE

Apptive Environmental | Provo, UT

Jan 2022 – Present

Manager, Platform Operations (DevOps/SRE) - Oct 2025 – Present

Led a team of DevOps engineers responsible for all infrastructure supporting the company's custom-built internal platform and CRM, serving nationwide field operations. Owned a ~\$500K annual infrastructure budget and cost optimization along with platform cybersecurity posture, incident management, and team standards for reliability and on-call response.

- Led infrastructure architecture and implementation for the company-wide platform migration from legacy and third-party software to modern microservices and event-driven applications with high availability, migrating 12+ microservices and maintaining 99.9% uptime
- Managed multi-cloud infrastructure across AWS (EKS, ECS, RDS, ElastiCache, ECR, ELB, Secrets Manager, CloudWatch), DigitalOcean, Cloudflare, Vercel, and an on-prem K3s Linux environment in the corporate datacenter
- Reduced annual cloud spend by ~\$100K by migrating the staging environment to on-prem infrastructure
- Architected event-driven systems handling 4M+ events per day across the platform
- Evaluated and iterated through multiple orchestration strategies (Docker Compose, Docker Swarm, K3s, ECS) before standardizing on EKS for production
- Owned platform cybersecurity posture including secrets management, infrastructure hardening, and SIEM and XDR management
- Built the company's incident management and disaster recovery program from the ground up, defining severity and priority levels and implementing runbooks, alerting, paging, and response workflows via FireHydrant
- Built and maintained CI/CD pipelines in GitHub Actions and managed infrastructure-as-code using OpenTofu (Terraform) and Pulumi
- Administered developer and DevOps cloud business applications including Wiz, CloudAMQP, Pulumi, AWS, DigitalOcean, GCP, Observe, and Grafana

Technologies: *GitHub, FireHydrant, Wiz, SIEM, XDR, Docker, Kubernetes, Helm, Lens, RabbitMQ, DigitalOcean, Pulumi, Terraform, Cloudflare, Vercel, OpenTelemetry (OTEL), Grafana, Observe, Loki/Prometheus/Tempo (Observability), Bash*

Systems Engineer > Systems Engineer II > Systems Engineer IV - Dec 2023 – Oct 2025

Advanced through three levels of the systems engineering team while leading high-impact infrastructure, security, and platform initiatives across the company. Owned major vendor relationships, mentored junior engineers, and drove team standards for automation and reliability.

- Led full network architecture and installation for a new 130K+ sqft corporate campus, managing a \$2M budget from design through deployment
- Reduced annual software spend by \$120K+ through contract negotiations and platform consolidation
- Led the ground-up ServiceNow implementation across the company, deploying ITSM, ITAM, HAM, SAM, Employee and Service Portals, Now Mobile, and App Engine Studio
- Built custom applications and workflows in App Engine Studio that delivered cross-functional business value while adhering to ServiceNow best practices
- Selected for ServiceNow's 2025 Product Advisory Council for GenAI, contributing product design and direction feedback alongside enterprise leaders
- Personally installed network and training equipment across 60+ field offices nationwide, unifying the corporate network and improving visibility and productivity in remote locations
- Matured company security posture by rolling out SSO across business applications, strengthening employee lifecycle management, and introducing passwordless authentication and access governance
- Transitioned MDM and asset management strategies to cover 7,500+ assets valued at \$3.7M+

- Mentored junior engineers and established team standards for automation and infrastructure reliability

Technologies: Kandji, VMware, UniFi, Email Security, Amazon Connect, GCP, Endpoint Security, Slack

Systems Administrator - Dec 2022 – Dec 2023

Promoted from the support team into a systems administration role, taking ownership of core business applications and identity infrastructure. Partnered with engineering to roll out enterprise-wide identity, access, and service management platforms.

- Owned administration of Atlassian, ServiceNow, Okta, Google Workspace, AWS, Active Directory, Cisco Meraki, and Meraki Systems Manager
- Managed MDM and endpoint management across the company's device fleet
- Led the company-wide implementation of Okta and ServiceNow in partnership with engineering teams, establishing identity and access management and governance practices
- Strengthened IAM controls and governance processes to support a growing organization

Technologies: Atlassian, ServiceNow, AWS, Active Directory

Technical Support Analyst - Jan 2022 – Dec 2022

Joined as part of the first in-house IT team during a period of rapid buildout, stepping into a large support backlog across thousands of employees. Drove high-volume ticket resolution and set team standards while designing workflows that scaled the team's efficiency, and managing company assets.

Technologies: FreshService, Google Workspace, Okta, Meraki Systems Manager, Cisco Meraki, Zendesk, Active Directory, Microsoft 365

Namify | Springville, UT

Aug 2021 – Jan 2022

Systems Administrator

Served as the sole IT generalist at a small company, wearing multiple hats across service desk, systems administration, networking, cybersecurity, and hardware support. Owned end-user support processes while modernizing legacy infrastructure with new tools and workflows.

Technologies: Asana, Fortinet, Legacy Software, Windows Server, IIS, Active Directory, Hyper-V, GoLang, Google Workspace, GCP

Dormy | United States (Remote)

Feb 2025 – Aug 2025 (Concurrent)

Founder/Engineer

Founded and built Dormy, a property management and rental discovery startup, including all engineering, UX research, and customer development efforts. Designed and shipped both a full-featured web platform and a consumer iOS app, onboarding a mid-size property management company as an active client.

Technologies: React/Vite, Typescript, Kubernetes, GoLang, Adobe Sign, OpenAI API, PostgreSQL, S3, Google Places, Swift, Linux/Ubuntu Server, Proxmox, Cloudflare, GitHub Actions

SKILLS & CORE COMPETENCIES

Infrastructure & Networking, Cloud & DevOps, Platforms & Identity, Automation, Development, Leadership, Project Management, Process Improvement, Cross-Functional Collaboration, Vendor Management, Contract Negotiation, Budget Management

Secret Weapon: Conveniently Lucky

EDUCATION

Bachelor of Science, Technology Management

Anticipated May 2027

Utah Valley University, Orem, Utah

Associate of Science

May 2019

Utah Valley University, Orem, Utah

CERTIFICATIONS & ADDITIONAL EXPERIENCE

- Product Advisory Council Member – GenAI, ServiceNow
- ServiceNow Certified Systems Administrator (CSA)
- Okta Certified Professional and Okta Certified Administrator
