PROFESSIONAL SUMMARY

IT and Platform Operations leader with experience spanning end-user support, systems administration, network architecture, and cloud/Kubernetes infrastructure, bridging business technology and production platforms.

PROFESSIONAL EXPERIENCE

Apptive Environmental | Provo, UT

Jan 2022 – Present

Manager, Platform Operations (DevOps) - Oct 2025 – Present

In my current role, I lead a team of DevOps engineers responsible for all infrastructure supporting our custom-built internal platform and CRM, serving our field operations nationwide. My major focus has been leading the infrastructure architecture and implementation for the company-wide platform migration, moving from legacy and third-party software to our modern microservice and event-driven applications. This is primarily housed in AWS (EKS, ECS, RDS, ElastiCache, ECR, ELB, Secrets Manager, and CloudWatch) alongside an operational cluster in DigitalOcean, and an on-prem K3s environment in our corporate datacenter that I manage. Our frontend applications live on Cloudflare Pages/Workers and Vercel. Before landing on EKS as the production standard, I evaluated and iterated through multiple strategies including Docker Compose, Docker Swarm, K3s, and ECS. This infrastructure comes with a ~\$500K annual budget that I am responsible for. In addition to this, I also own the cybersecurity posture for platform infrastructure, from secrets management to hardening and SIEM/XDR management. I also built out the company's outage management process from definitions for severity and priority levels, to hands-on implementation of runbooks, alerting, and paging. We deployed FireHydrant as the tool of choice here. On the automation side, I build and maintain CI/CD pipelines in GitHub Actions, and manage infrastructure-as-code (IaC) using OpenTofu (Terraform) and Pulumi. I also manage developer and devops specific cloud business applications such as Wiz, CloudAMQP, Pulumi, AWS, DigitalOcean, GCP, Observe, Grafana and more. Alongside the technical work, I set team standards for uptime, reliability, and on-call response, to keep our platform dependable as it scales.

Technologies: *GitHub, FireHydrant, Wiz, SIEM/XDR, Docker, Kubernetes, Lens, RabbitMQ, DigitalOcean, Pulumi, Terraform, Cloudflare, Vercel, OpenTelemetry (OTEL), Grafana, Observe, Loki/Prometheus/Tempo*

Systems Engineer > Systems Engineer II > Systems Engineer IV - Dec 2023 – Oct 2025

Over this period, I worked my way up through the systems engineering team while leading multiple key projects and taking on vendor relationships across the organization. One of the largest was the full network architecture and installation for our new 130K+ sqft corporate campus, which I led with a \$2M budget. Through contract negotiations and platform consolidation, I also reduced annual software spend by more than \$120K. After the initial rollout of ServiceNow, I led its ground-up integration across the company, deploying ITSM, ITAM, HAM, SAM, Employee and Service Portals, Now Mobile, and App Engine Studio. Using AES, I built custom applications and workflows that brought value across the business while maintaining ServiceNow best practices, and in 2025 I was selected for ServiceNow's Product Advisory Council for GenAI, where I contributed feedback on product design and direction alongside leaders from large enterprises. Beyond the corporate campus, I personally installed network and training equipment in our 60+ field offices nationwide, unifying the corporate network and improving visibility and productivity in remote locations. Our team also matured the company's security posture by rolling out SSO (Single Sign-On) across business applications, strengthening employee lifecycle management, and introducing passwordless authentication and access governance. We transitioned our MDM and asset management strategies to cover more than 7,500 assets valued at \$3.7M+. Throughout it all I mentored junior engineers and drove team standards for automation and infrastructure reliability.

Technologies: *Kandji, VMware, UniFi, Email Security, Amazon Connect, GCP, Endpoint Security, Slack*

Systems Administrator - Dec 2022 – Dec 2023

Promoted into a systems administration role after successes on the support team. During this period, I took ownership over multiple business applications including Atlassian, ServiceNow, Okta, Google Workspace, AWS, Active Directory, Cisco Meraki, and Meraki Systems Manager. I managed our MDM (Mobile Device Management) solutions and endpoint management, and worked closely with engineering teams to implement Okta and ServiceNow across the company, establishing strong identity and access management, and governance practices company-wide.

Technologies: *Atlassian, ServiceNow, AWS, Active Directory*

Technical Support Analyst - Jan 2022 – Dec 2022

While in this position I was a part of the first in-house IT team, and stepped into an environment with a large backlog of support tickets from thousands of employees. In this role, I drove high-volume ticket resolution with a high level of quality during a period of rapid IT buildout, while managing hardware and software asset deployments and tracking. I also designed and implemented workflows and processes to increase team efficiency, which allowed us to clear our backlog completely, and free up the support team to work on strategic projects.

Technologies: FreshService, Google Workspace, Okta, Meraki Systems Manager, Cisco Meraki, Zendesk, Active Directory, Microsoft 365

Namify | Springville, UT

Aug 2021 – Jan 2022

Systems Administrator

This was one of my first official roles in the IT space, and being at a smaller company gave me the opportunity to wear lots of hats. In this position, I was responsible for supporting all of our employees with technical needs, and owning the process for this support. I also maintained and tracked all of our hardware and assets from outdated embroidery machines that took floppy disks, to new laptops, iPhones, and Windows Servers. In this role I functioned as service desk, systems administrator, network and cybersecurity administrator, and machine tech. I was also able to introduce new technologies during my time at Namify to help modernize their infrastructure, including tools for employee lifecycle management, device provisioning, identity and access governance, and load balancing for our web applications.

Technologies: Asana, Fortinet, Legacy Software, Windows Server, IIS, Active Directory, Hyper-V, GoLang, Google Workspace, GCP

Dormy | United States (Remote)

Feb 2025 – Aug 2025 (Concurrent)

Founder/Engineer

During my time building Dormy, I had the opportunity to spend time working hands-on with customers and clients, and engaging in UX research and marketing campaigns. Originally, I built a fully featured property management platform. This was an end to end process that had property management tools, maintenance tracking, AI lease generation, contract signing and management, rent payments, and tenant communication, among other features. I onboarded a mid-size property management company onto my platform, which they used throughout the life of Dormy. Later, I built a mobile iOS app for tenants to discover spaces to rent, which functioned almost like Tinder, but for finding apartments. This was officially published on the App Store.

Technologies: React/Vite, Typescript, Kubernetes, GoLang, Adobe Sign, OpenAI API, PostgreSQL, S3, Google Places, Swift, Ubuntu Server, Proxmox, Cloudflare, GitHub Actions

SKILLS & CORE COMPETENCIES

Infrastructure & Networking, Cloud & DevOps, Platforms & Identity, Automation, Development, Leadership, Project Management, Process Improvement, Cross-Functional Collaboration, Vendor Management, Contract Negotiation, Budget Management

Secret Weapon: Conveniently Lucky

EDUCATION

Bachelor of Science, Technology Management

Anticipated May 2027

Utah Valley University, Orem, Utah

Associate of Science

May 2019

Utah Valley University, Orem, Utah

CERTIFICATIONS & ADDITIONAL EXPERIENCE

- Product Advisory Council Member – GenAI, ServiceNow
- ServiceNow Certified Systems Administrator (CSA)
- Okta Certified Professional
- Okta Certified Administrator
